ZAINEB BEN FADHL

Junior AI Engineer — AI Solutions Monitoring, Quality & Continuous Improvement

benfadhelzaineb1@gmail.com • +216 99 576 809 • Tunis, Tunisia

PROFILE

Junior AI Engineer with hands-on, end-to-end experience deploying and supervising AI/ML solutions in production — including performance validation, data-drift monitoring, and automated alerting. Analytical and detail-oriented, with a proven habit of verifying data reliability, documenting technical procedures, and driving continuous improvement across cross-functional and industrial teams. Comfortable working with international stakeholders (English & French, both B2) and standard collaborative tools (Excel, Teams, SharePoint, Power BI).

KEY SKILLS FOR AI SUPERVISION & QUALITY ROLES

AI Supervision & Quality Control: Model performance validation, data-drift monitoring & alerting (Prometheus), CI/CD quality gates with automatic rollback, output/result verification

Workflow Monitoring & Reporting: Power BI dashboards, SQL & Excel reporting automation, KPI tracking, anomaly detection and escalation

Documentation & Continuous Improvement: Technical documentation, procedure standardization, Agile Scrum, CRISP-DM

Digital & Collaboration Tools: Excel (advanced), Power BI, Microsoft Teams / Outlook / SharePoint, SQL, Git/GitHub

AI/ML Technical Foundation: Python, Machine Learning, Deep Learning, NLP, LLMs, RAG, Computer Vision, Reinforcement Learning, Agentic AI

Languages: French — B2 (DELF B2 certified), fluent; English — B2 (TOEIC certified), professional working proficiency

PROFESSIONAL EXPERIENCE

AI Engineer (Graduation Internship) — Jan. 2026 – May 2026

Anavid France — Video-surveillance AI sector — Continuous improvement of an action-detection model & MLOps

- Monitored and validated the performance of a deep-learning action-detection model in production for theft detection, verifying accuracy and flagging inconsistencies before deployment
- Deployed a continuous-improvement mechanism (Reinforcement Learning, Active Learning, Meta-Learning) to prioritize informative data and accelerate adaptation to new scenarios
- Set up CI/CD pipelines with data-drift monitoring (Prometheus) and automatic rollback in case of performance degradation — ensuring ongoing quality control of the AI system
- Documented model evaluation procedures and escalated detected anomalies within an Agile team to standardize the improvement workflow

Technologies: *Python, PyTorch, OpenCV, Reinforcement Learning, Active Learning, MLOps, CI/CD, Prometheus*

Freelance Web & AI Developer — 2024 – 2026

Self-employed — Web development & AI/LLM solutions for independent clients

- Managed projects end-to-end — requirements gathering, architecture, development, testing, documentation, deployment, and client hand-off
- Built and validated AI-powered features on demand (chatbots, RAG pipelines, LLM fine-tuning), verifying output relevance and accuracy before delivery
- Deployed and maintained applications using Docker and cloud/database services (MongoDB, Supabase)

Technologies: *React, Node.js, Python, FastAPI, LLMs, RAG, MongoDB, Supabase, Docker*

BI Developer (Internship) — Jun. 2025 – Jul. 2025

LEONI Sousse — Major industrial group, automotive wiring (on-site) — Business Intelligence & web development

- Designed and maintained interactive Power BI dashboards for HR and production monitoring, adopted daily by more than 50 employees across the factory
- Automated SQL and Excel data updates and reporting, reducing manual verification tasks and improving reliability
- Delivered centralized, up-to-date indicators that strengthened business decision-making and issue escalation to management
- Integrated Power BI Embedded into ReactJS applications for direct data access from the business interface

Technologies: *Power BI, Python, ReactJS, SQL, Excel*

Data Analyst (Internship) — Jun. 2024 – Sept. 2024

ONRTECH France

- Built and monitored automated web-scraping pipelines (Selenium, BeautifulSoup), scheduling recurring runs to ensure dataset freshness and detect anomalies

- Extracted, verified, and cleaned large-scale product data (100,000+ records) to ensure reliable downstream analysis

Technologies: *Python, Selenium, BeautifulSoup, Pandas*

EDUCATION

Engineering Degree in Computer Science, Data Science Specialization **2023 – 2026**
Polytechnique Sousse

Preparatory Cycle, Physics-Chemistry (P.C.) **2021 – 2023**
Institut Préparatoire aux Études d'Ingénieur de Kairouan

SELECTED PROJECTS

- **Reproducible & Deployable MLOps Pipeline —** architected a complete workflow (Git, Docker, Kubernetes, DVC, MLflow, ZenML) with Grafana/Prometheus monitoring for continuous quality tracking of deployed models.
- **Corporate Mental Health Monitoring via Agentic AI —** applied NLP to monitor employee feedback and detect anomalies (stress/burnout signals), with a full MLOps pipeline deployed on Azure.
- **Sports Injury Prediction Platform (TechX 2025, 3rd place) —** trained and validated ML models (85% accuracy) integrated into a React/API monitoring platform with temporal risk tracking.

More projects on portfolio: portfolio-zainebbenfadhl.vercel.app

CERTIFICATIONS

Data & AI: Machine Learning (IBM), Deep Learning (NVIDIA), AI Engineer for Data Scientists (DataCamp), Agentic AI (DataCamp), Python Data Analyst (Certiport), R Programming (DataCamp)

Networking: CCNA1, CCNA2 (Cisco)

Languages: DELF B2 (French), TOEIC B2 (English)
